

ESSENTIAL TIPS AND TRICKS TO **STAY SAFE** **ONLINE**

THIS MONTH IS DEDICATED TO NATIONAL CYBERSECURITY AWARENESS (NCSAM).
LET'S TAKE A LOOK AT SOME OF THE TIPS YOU SHOULD KEEP IN MIND AS YOU CONTINUE
YOUR EFFORTS TO KEEP YOUR ORGANIZATION SAFE FROM CYBERATTACKS.

1

Don't Ignore the Signs of a Possible Attack

The first step to staying safe online is recognizing when you might be in a compromising situation. It's important to keep an eye out for red flags and notice any unusual activity that may indicate a cyberattack.

2

Educate Your Staff on Cybersecurity Practices

The more your internal team members understand about cybersecurity risks, the easier it will be to spot potential threats and take action before they become problematic.

3

Create a Security Culture in Your Organization

Creating a culture that values security requires leadership from the top down. That's why it's so important to recognize cybersecurity as a top priority in all organizational decisions.

4

Stay Up-to-Date on Industry Trends and Standards

It's important to keep an eye on the cybersecurity trends that are happening in the industry as a whole. This will help you stay up-to-date with best practices and standards that may be changing from one year to the next.

5

Hire Top Talent to Protect Your Organization

Security auditors have a critical role to play in the overall cybersecurity equation. They can help your organization identify and solve the most pressing problems.

6

Implement Emergency Procedures that Include a Communication Strategy

A mass notification system like Regroup allows you to quickly and efficiently communicate with your entire team about possible threats — and during actual emergencies — by reaching them on the platform they prefer (cell phones their desktop computers email and more).
